Energy Management Conservation

The Governing Board embraces energy conservation and believes it to be our responsibility to ensure that every reasonable effort is made to conserve energy and natural resources while exercising sound financial management.

We recognize the importance of adopting an energy management and conservation policy in order to govern this program. We also affirm that implementation of this policy will be the joint responsibility of the Board, administration, faculty, staff, students and support personnel. Success is based on cooperation at all levels.

Accurate records of energy consumption and cost of energy will be maintained for each District location. This will provide verifiable performance information to the Board and Administrators of the various institutions within Lompoc Unified School District on the goals and progress of the energy conservation program.

The designated campus Administrator will be accountable for energy management on his/her campus with energy audits being conducted and feedback provided by the Energy Educator/Manager.

To ensure the overall success of the energy management program, the following specific areas of emphasis will be adopted:

1. An energy conservation and management program will be administered primarily through the Energy Educator/Manager.
2. The Governing Board expects all personnel at each District location to make a positive contribution to maximize energy conservation and produce real energy savings.
3. "Energy Guidelines" will be adopted that define the "rules of engagement" in implementing our energy program.

Further, to promote a safe, healthy learning environment and to complement the energy management program, each District location shall review and adhere to the preventative maintenance and monitoring plan for its facilities and systems, including HVAC, building envelope, and moisture management.

Lompoc Unified School District
