

**ENERGY CONSERVATION**

The Governing Board believes that measures to conserve energy resources must be an integral part of the school program. Declining levels of natural energy, as well as the rising costs of energy and impact on the District budget, mandate that the District develop and implement plans to conserve all forms of energy used throughout the District.

The Superintendent will develop an energy conservation program. Principals and administrators should advise and direct their personnel regarding this program and conservation goals. Guidelines for addressing the conservation goals should be emphasized at the beginning of each school year and reiterated throughout the year as the need arises.

Cooperation and some sacrifice will be required of each employee and student to achieve a meaningful energy conservation program that results in a more efficient use of energy resources as well as a reduced burden on the District budget.

The Superintendent or designee shall regularly inspect district facilities and operations and make recommendations, for maintenance and capital expenditures which may help the district reach its conservation and management goals.

The Superintendent or designee shall make every effort to identify funding opportunities and cost-reducing incentive programs to help the district achieve its conservation and management goals.

The Superintendent or designee shall periodically report to the Board on the district's progress in meeting its conservation and management goals.
